Art Unit: 2877

synchronism with said pixel clocks and outputs said interference data in the order that they were written by delay data output from said delay unit, and a pulse-width modulating unit which modulates the pulse widths of interference data which is output from said memory unit, in combination with the rest of the limitations of the claim.

The dependent Claims 1-7 and 9-18 are allowed by virtue of their dependence upon Claim 1.

As to Claim 8, the prior art of record taken along or in combination, fails to disclose or render obvious a memory unit which stores interference data output from said interference unit in synchronism with said pixel clocks and outputs said interference data in the order that they were written by delay data output from said delay unit, and a pulse-width modulating unit which modulates the pulse widths of interference data which is output from said memory unit, in combination with the rest of the limitations of the claim.

As to Claim 19, the prior art of record taken along or in combination, fails to disclose or render obvious a beam detection signal controller which outputs beam detection position control signals to control scanning line pitches of laser beams according to a plurality of beam detection signals output from said image recording unit and a controller which controls said image recording unit at least according to said beam detection position control signals, in combination with the rest of the limitations of the claim.

The dependent Claims 20-22 are allowed by virtue of their dependence upon Claim 19.
